Data Analytics and Governance

When faced with the challenge of generating intelligence from disparate enterprise data, even your first step seems daunting. With expertise based on decades of experience with large datasets, we extract meaningful content buried in dynamic datasets. We apply our data governance expertise for reliable and trusted analytics to support critical decision making. Our approach to data governance is firmly planted in the mission space and is technology agnostic.

We help customers:

- Increase discoverability
- Assess reliability
- Ensure appropriate use
- Comply with legal and regulatory requirements

DATA ANALYTICS

- Data Warehousing
- Big Data
- Data Science and Entity Analytics
- Machine Learning and AI
- Geospatial Intelligence
- Data Conditioning

DATA GOVERNANCE

- Public Sector Data Governance Certified Professionals
- An approach that originated in the IC mission space, our data governance services bridge the gap with the IT enterprise without ceding mission data requirements to technical developers.
- We employ a data curation focus that maximizes the impact of appropriate metadata standards and effective metadata management.
